

Reading Passage 11

Day or Night?

Could I ask you a question?

Which do you prefer, day or night?

When our part of the Earth turns to face the sun, it is day.

When it turns away from the sun, sunlight can no longer reach us. It gets dark. It is night.

As the Earth spins round and round it gives us sunlight for day and darkness for night. Most of us like the day.

We can do many things in the light.

People who like the night are sometimes called “night owls.”

They like to stay up late and then sleep in the day, just like an owl.

Which do you like best, day or night?
